## OSPI-Europe

Optimizing Suicide  
Prevention Programs and their  
Implementation in Europe

## WHAT IS OSPI-Europe?

OSPI-Europe: Optimizing suicide prevention programs and their implementation in Europe. The goal of OSPI-Europe is to provide EU members with an evidence based prevention concept for suicidality. Further, concrete materials and instruments for running and evaluating these interventions and recommendations for the proper implementation of the intervention will be developed.

## WHAT IS THE INTENTION OF OSPI-EUROPE?

The intention of OSPI-Europe is to provide health politicians, stakeholders and the European Commission with an evidence based and efficient concept for suicide prevention with corresponding materials and instruments for multifaceted intervention, as well as guidelines for the implementation process. These aims will be achieved by the following five objectives:

- Analysis of differences in suicide rates among European countries and harmonization of procedures for definition, assessment and evaluation of suicidality

- Development of a state of the art intervention concept for the prevention of suicidality
- Implementation of comparable multilevel community-based prevention interventions in four European model regions
- Evaluation of the interventions in a pre-post, controlled and cross-nationally comparable design concerning effectiveness, efficiency, involved processes and the interplay between the single intervention measures
- Distribution of an optimized suicide preventive intervention concept, corresponding materials and instruments, and recommendations for implementation to policy makers and stakeholders

## KEY DATA FOR OSPI-Europe

Start date:	1 October 2008
Runtime:	4 years
EC funding:	2,991,727.00 Euro

## WHO SUPPORTS OSPI-EUROPE?

OSPI-Europe is a collaborative research project funded by the European Community's Seventh Framework Programme (FP7/2007-2013) under Grant Agreement N° 223138.
